COSMACRAFT USER GUIDE

Info Tool – This item is used to get information about objects in the COSMACRAFT world. Right click on an object while holding it to find out what the object does. Also provides data for COSMA-7 compute nodes.
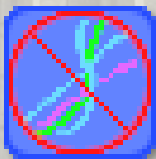

Eject Tool – This tool is used to eject servers from the rack and replace them. Right click on a server or switch while holding this item and watch it slide forwards! Right click in the same spot to put the server back.

Data Tool – Right clicking on any of the server racks (the ones with servers in, not the empty ones) will switch on an overlay that shows you the core usage and status of COSMA-7 compute nodes. Right click again to turn it back off.

Door Key – This item lets you open the doors at the back of the server racks! Right click on a rack when holding the key and watch the door swing open. You can now see all of the internal cabling. Right click again to close the door.

Toggle Cables Tool – This final tool lets you turn the cables on and off so you can get a better view of the servers and switches. Right click anywhere on a rack to turn them off and right click again to turn them on again.

Other Tips – Use the buttons to teleport/navigate your way between the datacentre and cathedral. • Don't click on too many things in quick succession, it's easier slower. • Make sure you're in adventure mode otherwise you could accidentally break things. • Explore and try to complete the challenges. • Ask for help if you get stuck. • Have fun!
